

## **Illuminight Outdoor Projection Presentation**

**When: Friday, September 14, 8:00-8:30 p.m.**

**Where: Cruess Hall, California Ave Side,  
University of California, Davis Campus,  
Davis, California**

You are invited to a free end of summer, outdoor public performance of dynamic visuals (Video Jockeying) to music and/or sound made with Processing by students in Design 111 Coding for Designers Summer Term 11 taught by Anne-Marie Schleiner. These live performances, inspired by Light Festivals with projection mapping and generative software, will be projected on the exterior street facing side of the Design Building at California Ave. From fast beats and rhythms to slow, reflective movements, these interactive projects set the mood with color, pace, and abstract patterns and shapes like mandalas, fireworks, and waves. Under the hood, each final project applies object-oriented programming techniques and will make you want to learn to code.
